

ALLINA HEALTH LABORATORY

New test

Test name: Activated protein C resistance

Test #: 14242/LAB14242

Notification date: January 8, 2020

Effective date: January 14, 2020

Effective January 14, 2020, the Activated protein C resistance assay (14242), referred to LabCorp, will be available for order.

Test Name:	Activated Protein C Resistance (APCR)
Test number:	14242
Excellian order:	LAB14242
Abbreviation:	APCR
Useful for:	Screening test for the factor V Leiden gene mutation and other causes of activated protein C resistance
Specimen:	1 mL Sodium citrate (Na cit) plasma
Collection container:	Lt blue
Transport/Stability:	Frozen – 3 years
Performing Lab:	LabCorp (117762)
Days set up:	Mo - Sa
Expected TAT:	2 - 3 days
Reference range:	2.2 – 3.5 ratio
Processing:	Double spin, separate, and freeze. If the patient's hematocrit exceeds 55%, the volume of citrate in the collection tube must be adjusted.
Container:	LabCorp purple cap frozen transport vial
CPT code:	85307

Interfaced clients: if this is an assay that will be utilized at your practice, contact your account representative for build information and to arrange testing.
