

## **Submission of Specimens for Transfusion Services Testing**

### **Clients not performing on-site transfusion services testing**

Allina Health Laboratory will perform transfusion service testing as requested.

### **Clients performing on-site transfusion service testing**

Allina Health Laboratory will not perform any follow up Immunochemistry workups (i.e. Antibody identification and titration studies) for clients that perform on-site transfusion service testing. These follow up tests must be submitted directly to your blood product provider (American Red Cross or Memorial Blood Center). Allina Health Laboratory is not able to provide pass-through services for these Immunochemistry workups.

Transfusion service consultations (Anatomic Path Consult, LAB7303) are available only to facilities with Hospital Pathology Associates (HPA) medical directors. These consultations are limited to pathologist final review and sign off of antibody identification and transfusion reactions; testing services for these cases are not provided. Submit case details following your medical director's instructions.

- Order Anatomic Path Consult; LAB7303
- Fax transfusion work up paperwork to the Allina Health Laboratory Consult Center at (612) 863-9489.
