

**THYROGLOBULIN TUMOR MARKER**  
**LAB429**

**QUICK REFERENCE**

Effective immediately, the Thyroglobulin tumor marker assay (429/LAB429) has been discontinued and no longer orderable.

**DETAILS**

The suggested alternative is the Thyroglobulin Antibody and Thyroglobulin, IMA or LC/MS-MS assay (13509/LAB13509) referred to LabCorp.

**Thyroglobulin Antibody and Thyroglobulin, IMA or LC/MS-MS-13509**

Test info	Specimen	Performance	Clinical and Interpretive info	Billing	Tracking
<b>Test name:</b>		Thyroglobulin Antibody and Thyroglobulin, IMA or LC/MS-MS			
<b>Test number:</b>		13509			
<b>Excellian order number:</b>		LAB13509			
<b>Abbreviation:</b>		THYROGLOB			
<b>Alternate names:</b>		Thyroglobulin by IMA Thyroglobulin by LC-MS/MS			
<b>Tests included:</b>		Thyroglobulin antibody (TgAb) testing is performed on all samples.  If TgAb is negative, serum thyroglobulin is measured by a sensitive IMA.  If TgAb is positive, serum thyroglobulin is measured by an LC-MS/MS method. .			
<b>Useful for:</b>		Thyroglobulin (Tg) measurement is intended to aid in monitoring for the presence of orthotopic and/or metastatic thyroid tissues in patients who have had thyroid gland ablation (using thyroid surgery with or without radioactivity). Measurement of thyroglobulin antibody (TgAb) is used to identify patient samples that may be affected by TgAb interference in the measurement of Tg. Quantitative TgAb concentrations can also serve as a surrogate tumor marker for DTC recurrence and for monitoring changes in tumor mass in certain patients.			

Complete test information is available in the Test catalogue.
